

AIA simplifies investment with AI

Financing

The collected capital will be managed as part of an investment fund.

- The goal is not another investment fund. The purpose is to use the profit, like a fund performance fee, from the fund to advance the goal of automating investing. It may have the following characteristics:
 - Investment will not include any leverage and restricted to equity
 - Although we would like to have the flexibility to manage investments as frequently as needed, the intended asset holding period is long term. This will allow us to keep a significant focus on developing the product instead of frequent asset management.
 - Only US publicly listed companies
 - Previous characteristics are subject to investors preferences

Alternative options like debt will be considered
